Your KnightGUARDIAN Options

KnightGUARDIAN is a feature-rich service that is very easy to use. Selecting the option that works best for your company depends on a number of things including your risk tolerance and exposure, business processes, and budget. KnightGUARDIAN will work with you to assess your needs and customize a solution that best suits your organization.

According to the feedback we have been receiving in the marketplace, clients who conduct a large volume of business (that is more than 5000 transactions daily) prefer an **Integration** of KnightGUARDIAN with an existing transactional system they identify. An integration means that KnightGUARDIAN is hosted on the client's server, behind their firewall, and is completely customized to work seamlessly with existing business operations. KnightGUARDIAN's "searching" function takes place "in the background" – requiring no additional data entry steps than are currently being used.

Clients that perform only a few transactions per month opt for accessing KnightGUARDIAN via the Internet through the use of a **Subscription**. To provide maximum flexibility to our clients that choose this option, KnightGUARDIAN offers subscription systems that are located on shared servers or clients may prefer using a dedicated server.

The final option is designed for clients who do not have the resources in-house, or the desire, to manage this process and simply wish to **Outsource** the entire task to KnightGUARDIAN. For these clients, KnightGUARDIAN personnel perform the necessary searches and provide the support to resolve potential matches.

Whether your company needs a full-service outsource solution, a system integration, or a simple subscription, KnightGUARDIAN can be customized to fit your needs.¹

¹ Customizations may include the addition of functionality not currently available and would be in addition to basic KnightGUARDIAN rates.
